Day-2 8/5/26

· Salesforce platform Explained

→ What is an App?

It is a collection of related tools, tabs, and features used for specific purpouse.

Ex:- Sales App → Used by Sales team.

Service App → Used by Support team.

→ What is an object?

Object stores data in salesforce.

Similar to table in database.

Records → rows

Fields → Columns.

→ Tabs:-

Tabs help Users open objects quickly from UI.

ex:- Account Tab.

Contact Tab.

→ Salesforce UI is structured

- Apps
- Tabs.
- Records
- Reports
- Dashboards.

Ex:- Sales App → Opportunities Tab → Open Deal Record.

2. Salesforce Architecture Explained:-

(i) Multi-Tenant Architecture.

Many companies use the same Salesforce servers, but their data stays separate & secure.

Ex:- Same building {appartments in one building}
Different rooms.
Private belongings.

Benefits:- Low cost.
Automatic updates.
No Server Maintenance.

(ii) Why Salesforce is different:-

- Cloud based.
- Accessible from anywhere.
- No Software installation Needed.

(iii) How Salesforce Works:-

- Database
- Security
- UI
- Automation
- Reports.
- API's.

3. Developer vs Admin in Salesforce.

Developer	Admin
Code	No Code.
~~Clicks~~	~~Autogenerate Hall Ticket~~
Build custom Apps.	Create Reports, Add fields.

• Focus on Customization	• Focus on Configuration
* Configuration	Coding
• No programming	• programming
• Using drag-drop tools.	• Uses Apex/LWC
• Fast for simple tasks	• Used for complex logic.
• Done Mainly by Admin	• Done by Developer
ex:- Create field.	Ex:- payment integration.

Simple Flow:-

App → Tabs → objects → Records → User Actions.

App:- Student Management App.

Objects:- Student, faculty, Cource, Attendence

UI:- log in

open Attendence Tab.

views Attendance record.

Faculty updates Attendence.
