Day-4.

Flow Builder tutorial:

(i) Record Triggered flow:-

In salesforce it is an automation that runs automatically when a record is created, updated, deleted.

*When Does it execute:

(i) Before save flow:-

Runs before saving the record.

Used for: updating fields quickly.

Ex: If lead is created.

→ Set status = New

(ii) After Save flow:-

Runs After the record is saved.

Used for:

- Sending emails.
- Creating tasks
- updating related records

Examples:-

| Scenario | Automation |
| --- | --- |
| New employee added | Send Welcome email. |
| student fee paid | Send reciept |
| order completed | Generate invoice |
| Support Case high priority | Notify manager |

## Automation in Salesforce:-

It Means. Making run - automatically, instead of doing them Manually.

Ex:- When a deal is closed.
→ Send email.
→ Create task.
→ Notify Manager.

## Why Automation Matters:-

- Save time.
- Reduce Manual work.
- Avoid errors
- Increase productivity.

Ex:- Instead Manually, It sends the automatically

## Different types in Automation:-

1. Record-Triggered Flow:-
   Runs ~~created~~ records are created or updated automatically when

2. Screen Flow:-
   Interactive flow where users enter information step by step

   Ex:- employee onboarding from.

3. Scheduled Flow:-
   Runs at a fixed time.

4. Approval process:-
   Used when Approvals needed.

3. Validation Rules:-
check if entered data is correct

· Bussiness process Improvement:-
- Making work faster
- Standardizing tasks.
- Improving efficiency.
- Helping team work efficiently.

ex:-
Case created
→ Assign support agent
→ Send confirmation email
→ Notify support team.

4. Salesforce Flow:-
A Flow in salesforce is a tool used to automate tasks without coding.
It works like a flowchart

Basic Flow Types:-
(i) Screen Flow:-
shows screens to users and takes input.
Ex:- Registration form.
(ii) Record-Triggered Flow:-
Runs automatically when a record is created or updated.
Ex:- Sending confirmation email after Registration

(iii) Autolaunched Flows:-

Runs in the background automatically without screens.

Ex:- Updating data automatically

Flow Builder is the visual tool used to

Overview

Create flow.

Main parts:-

- Elements → Actions like create/update record.

Connectors → arrows connecting steps.

Canvas → Workplace where you design the flow.

Day-5

1. Apex in Salesforce:-

It is a programming language used for backend logic.

Why Apex:-

→ It is used when flow is not enough.

→ Salesforce has clicks (flow UI), but complex logic needs code.

It Runs on Servers

Used for automation + business logic.

2. Apex Basics:-

- Variables, loops, conditions (if-else)
  Same as java., classes also.
- Triggers:-
  Runs automatically when data changes
  ex:-
  - insert, delete, update.

Same like coding/programming language.
